

SpotCell 2500Xe Coverage Unit Mounting

This bulletin is a reminder that the SpotCell 2500Xe Coverage Unit (CU) should **not** be mounted horizontally. The 2500Xe is designed for convection cooling. There is insufficient airflow to guarantee a proper operating temperature in all circumstances with the unit mounted horizontally.

To avoid an operating temperature problem, the SpotCell 2500Xe CU should only be mounted vertically.

If there is no appropriate vertical surface available for mounting the CU, then the optional **SpotCell 2500Xe CU Ceiling Mount Kit** is available for hanging the Coverage Unit from a solid or suspended ceiling.
