

## SpotCell 2500Xe CU to DU Connection

This bulletin is a reminder that the SpotCell 2500Xe Coverage Unit (CU) should **never** be directly connected to the 10 ft (3 m) cable already attached to the Donor Unit (DU).

Directly connecting the CU to the DU cable may cause the system to malfunction.

Always use at least 30 ft (9 m) of copper core coax cable to connect the CU to the DU cable.
